

Read First Mailit 11

Thanks for evaluating Mailit 11 – the ultimate email plug-in for FileMaker® 15-26 (64-bit only) !

Installation Instructions

Plugin installation can be done in two ways: installation from a database file or by copying the plugin files directly into FileMaker's plugins directory. To install a plugin from a database file in FileMaker® Pro, open the FileMaker® database file "../Plug-in/Install Plug-in.fmp12" and click the "Install Plugin" button, after installing the plugin, click the "Install Assets" button to installing additional plugin files. To install the plugin on FileMaker® Server, open the FileMaker® database file "../Plug-in/Install Plug-in.fmp12" with FileMaker® Pro and set a password on the file and upload the file to the server, then open the file with FileMaker® Pro with server and click the "Install Plugin on Server" button.

More detailed instructions for installing the plugin using the database file and by copying the plugin file manually, described in the file "Mailit 11 Manual.pdf" which is located in the root of the archive.

Registration Information

Mailit is commercial shareware. You are allowed to try this FileMaker® plug-in for 14 days. After that the plug-in cannot be used any longer without registration. A trial sentence will be added to every outgoing message. These restrictions will be removed as soon as you register Mailit.
